

Hints from the Model Garage

Hold a mirror over the cell openings of your car battery to see if the electrolyte levels are high enough. With vent plugs off, the liquid inside shows up clearly, saving you, with some models, an uncomfortable stretch under the hood.

Glass polish wiped liberally on the inside of your car or station-wagon windows transforms the vehicle into a private dressing room at the beach. The translucent coating is quickly rubbed off later, leaving the windows clear and sparkling.

Switching tires can be simplified if you first mark their positions with a crayon (LR for left rear, for example). Then you can check later to see if they've been rotated properly (see sketch). Crayon won't come off during handling.

Tape a spare fuse on one of the wires leading to each fuse clip and it will always be handy when needed. But make sure the amperage of your spare matches that of the fuse to be replaced; amperage varies from place to place on a car.
