

Hints from the Model Garage

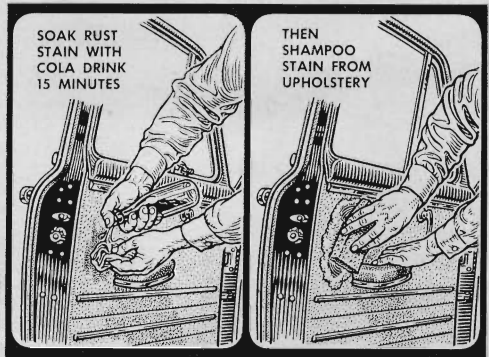

For blowing out dust from inaccessible places, solder the spout from an old oil can to a brass coupling that fits the blow-gun nozzle. You can then use the gun for normal cleaning operations and quickly attach the spout for a long reach.

Repair your own tubeless tires? You can seat the beads against the wheel rim so they'll hold air by applying a rope tourniquet around the tire. When partial inflation expands the tire, remove the rope and inflate to recommended pressure.

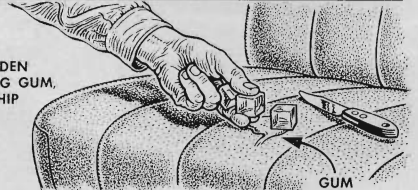

Make your own hood liner from blanket-type glass-fiber insulation sold by the yard at lumber yards. Cut the insulation to fit the underside of the hood, apply body undercoating to the metal, and immediately press the material in place.

SOAK RUST STAIN WITH COLA DRINK 15 MINUTES

THEN SHAMPOO STAIN FROM UPHOLSTERY

USE ICE TO HARDEN CHEWING GUM. THEN CHIP IT OFF WITH A DULL KNIFE POINT

To remove rust stains or chewing gum on upholstery one motorist uses cola drink and ice cubes. He soaks rust spots with cola, then shampoos the area after allowing it to act. Gum is hardened by chilling, then chipped off with a knife.
