

Hubcaps will stay new-looking if you remove them occasionally and wash and buff them. Use a lamb's-wool polisher in an electric drill to brighten the chrome, and finish off with a protective coat of paste wax buffed to a high polish.

Check the oil yourself? Keep your oil-pouring spout clean and ready to use by storing it in a plastic bag. Besides keeping dust and insects out of the spout, the bag will collect oil drippings, preventing a mess in the garage.

One torque wrench can be made to do the work of several. Just use wrench adaptors that can increase its capacity up to double the calibrations on the scale. An adaptor or extension arm equal to the lever length of the wrench will multiply the torque by

two; thus a 100-foot-pound wrench can be used to tighten bolts up to 200 foot-pounds. Shorter adaptors increase the range proportionately as shown. Adaptors with open or box ends (lower right) also extend the usefulness of the wrench.
