

# EIGHT TIMESAVERS

**1 REPLACING HEADLIGHT RIMS** is much easier if you use a simple trick that I tried out with great success. It consists of just marking a line with crayon or chalk across the edge of the rim and the edge of the lamp housing—this before you have removed the rim. Replacing the rim, use the line as a guide. The holding screws then will be easy to put back.—L.D.

**2 TIRE VALVES CAN BE REMOVED** quickly with a tiny tool you can make yourself and carry on your key ring. It is particularly useful for tires whose caps are not equipped with slotted stems. Obtain a short metal tube of suitable diameter, slot one end as shown in the sketch to fit over the keys of the valve insert, and attach a ring in the other end to go on your key ring.—R.W.

EYEGLASS CASE  
ATTACHED TO  
INSTRUMENT PANEL  
BY TWO VACUUM CUPS

**3 SWINGING RED REFLECTORS** will attract more attention than stationary ones behind your truck. Using free-swinging strap or T hinges, fasten reflector buttons, of the type sold for attaching license tags, to the holes in one leaf of each. Then screw or bolt each other leaf to the back of your truck or trailer. Motion of the vehicle will make the hanging leaves swing.—A.H.W.

**4 A DASHBOARD HOLDER** for eyeglasses can be made from a metal glasses case and two inexpensive rubber vacuum cups. Screw the cups tightly to the bottom of the case through holes drilled for the purpose. Cover with adhesive tape any projecting metal in the case, and press the cups wet with glycerin against the dash.—R.C.D.
