

USEFUL AUTO HINTS

1 DISPOSABLE TISSUES are always handy to keep in a car for removing grease from the hands, cleaning the windshield, and similar purposes. Instead of cluttering the glove compartment with the box, cut a rectangular hole in the fiber paneling and secure the box in place with metal clips. If you do not cut the paneling, an extra clip is of course needed under the box.—S. J. D.

2 FROST AND SNOW on the windshield are a constant nuisance if you have to keep your car outside overnight in the winter. To avoid the bother of having to clean off the glass each morning, put a sheet of cardboard under the wiper blade when you park the car. Use separate sheets on a car having a divided windshield. It's much simpler to pull off the cardboard than to scrape away frozen snow and sleet.—J. J. B.

3 CLEANING CAR WINDOWS without lint or streaks is easy if you unhook the blade from the windshield-wiper arm and use it as a squeegee to remove the excess water. Most wiper blades can be readily disconnected without tools. One advantage of this method is that you always know where you can find the squeegee.—W. E. B.

4 LOCATING A LEAK in a gas line, a manifold-vacuum line, or other metal or rubber tubing is sometimes difficult to do visually or by the sound of air hissing out. However, if you block one end and blow a puff of tobacco smoke into the other, it's simple to spot where the trouble lies.—H. W. S.
