

More Hints from the Model Garage

Dirt collecting in blind corners in the tailgate slots of a small truck or trailer often prevents the tailgate from closing fully. Eliminating these dirt traps is easy. Simply cut about 1" off the bottom of the tailgate cleats on each side.

This re-usable mask will keep paint off the tires when you spray or touch up the wheels. Cut a carton as shown and stand it beside the wheel. Make a ring of cardboard and slide it through the hole until it bears firmly against the rim.

A truck fusee, besides warning oncoming motorists at night, will throw enough light to enable you to change a tire or make a minor roadside repair. Tape one or two to your car's steering post. A twist will break it loose when needed.

Anchor your test meter firmly in place with suction cups to prevent vibration from knocking it to the ground. You can buy rubber cups with nuts molded in them. Drill holes in the back of the meter case for bolts to hold the cups.
