

**Automatic garage-light switch** is actuated by a leather "thumb" mounted on an extension arm on the garage door. The leather tab must be stiff enough to flip the toggle as the door is raised or lowered, yet flexible enough to brush past it.

**You can shield your eyes** from hood glare, when driving toward the sun, by placing a strip of windcardboard across the bottom of the windshield. Cut the strip to block out the hood—not the road—and screw metal clips to the molding to hold it.

**Reinforce heavy insulation**, or cover it if it's frayed, by wrapping with garden hose. Use a sharp knife to cut a continuous spiral from a piece of the required length, then wrap it around the wire. Twist it tight and tape the ends.

**Reading the crankcase dipstick** will be easier, especially when the oil is fresh and clear, if you drill four small holes between the FULL and ADD OIL marks. The holes covered by oil will appear as tiny lenses; the others will remain open.
