PAPER-BAG MITT COVERS GREASY HAND

6

DRAWINGS BY STEWART ROUSE

5 A STEERING-WHEEL PROTECTOR for use while you are working on your car and have occasion to turn the wheel with dirty hands is afforded by an ordinary brown paper bag. Put the bag, open, on the front seat before you start work. When you have to touch the wheel, slip your hand into the bag first and use the bag as a glove or mitten.—L. K.

6 BACK-SEAT SUN VISORS can be made from the type ordinarily mounted above the windshield of a car by attaching them as shown to the top of the rear door posts. They screen sunlight from either the rear-quarter or rear-door windows, as needed, giving shade where desired to passengers on the rear seat.—B. T.

7 ASH-TRAY RIMS, coated with luminous paint of the inexpensive variety obtainable at many hardware and paint stores, are easier for cigarette and cigar smokers to find during night driving. The glowing paint gives off just enough light to reveal the position of the ash-tray opening.—M. W.

ASH TRAY COATED WITH LUMINOUS PAINT

8 TWIN WHEEL CHOCKS that are easy to place against a wheel have a novel two-way blocking effect. Made from solid wood, as shown, they are held together by a permanent chain on one side, and an easily disconnected chain on the other. The link is made from a screen-door hook and eye which is closed in a jiffy after the chocks have been put in place for a tire change.—C. E. S.
