FOR CAR OWNERS

5 LICENSE-PLATE STRENGTHENERS for heavy trucks on which vibration often tears the sheet metal can be made with—hold your seats—more license plates! Just slap your expired plates against the backs of the new ones, and bolt them in place.—A.H.

6 TO REDUCE HEADLIGHT GLARE from your car mirror, replace the wire and rubber cups of a five-and-ten green celluloid shield with a new wire. Bend a hump in the new wire similar to the old one so the shield will snap up or down. With round-nose pliers, loop the ends of the wire to required needs of your car so that the unit can be attached over your mirror using the existing wind-shield molding screws.—D.C.

7 DASHBOARD HAND GRIPS for youngsters who like to stand up in the front compartment of a car make it easier for them to keep their balance as the car rounds corners. Ordinary screen-door handles bolted in place through holes drilled in the top of the dash make a neat job and will withstand much tugging.—I.B.G.
